

Federal Carbon Tax Review

What is the Carbon Tax?

The carbon tax is applied to your natural gas bill as a tax on the greenhouse gas emissions associated with burning the fuel. The federal carbon tax is applied to provinces that do not already have their own carbon tax system in place, which includes Ontario, New Brunswick, Saskatchewan and Manitoba. Funds collected from the carbon tax will be used to fund energy savings measures in each province that pays the tax.

Federal Carbon Tax Cost

The federal carbon tax will apply to businesses starting April 1, 2019, with the following 4-year projection on costs outlined in the graphic provided by Manitoba Hydro:

https://www.hydro.mb.ca/accounts_and_services/carbon_charge/

The Carbon Tax for Your Facility

Below is the 4-yr projected cost increase for your facility based on your typical annual natural gas consumption.

Carbon Tax 4-yr Projection				
Year	Carbon Tax (\$/ton)	Carbon Tax (\$/m3)	Annual Gas Consumption (m3)	Additional Annual Cost from the Federal Carbon Tax
2019	\$20	\$0.0391	494,000	\$19,315
2020	\$30	\$0.0587	494,000	\$28,998
2021	\$40	\$0.0783	494,000	\$38,680
2022	\$50	\$0.0979	494,000	\$48,363
